

Heavy Metals and Pesticides Statement

Greenwood Associates Inc. ("Greenwood") maintains a comprehensive Supply Chain Program that includes supplier qualification, certificate of analysis (CoA) requirements, and ongoing oversight for potential heavy metal contaminants and pesticide residues in all materials procured by Greenwood, whether intended for resale or use as manufacturing ingredients.

As part of this program, suppliers are required to provide CoAs and supporting analytical documentation demonstrating compliance with applicable regulatory requirements. This supplier-provided testing information is reviewed and serves as a verification component of Greenwood's Supply Chain Program.

To the best of our knowledge, products distributed or manufactured by Greenwood do not contain heavy metal contaminants nor pesticide residues at levels exceeding applicable limits established by United States, Canadian, and European Union authorities, including U.S. FDA action levels and EPA pesticide tolerances under 40 CFR Part 180; Health Canada's *List of Contaminants and Other Adulterating Substances in Foods* and maximum residue limits under the *Pest Control Products Act*; and EU maximum residue and contaminant limits under Regulation (EC) No. 396/2005 as amended and in force, and Commission Regulation (EU) 2023/915.
